- **NAV:** 96.9%
- **Annual management charge (AMC):** 0.75%
- **Estimated total expense ratio (TER):** 0.97%
- **ISIN:** LU1440702675
- **SEDOL:** BD87QV6
- **Bloomberg code:** CBKMWSP LX

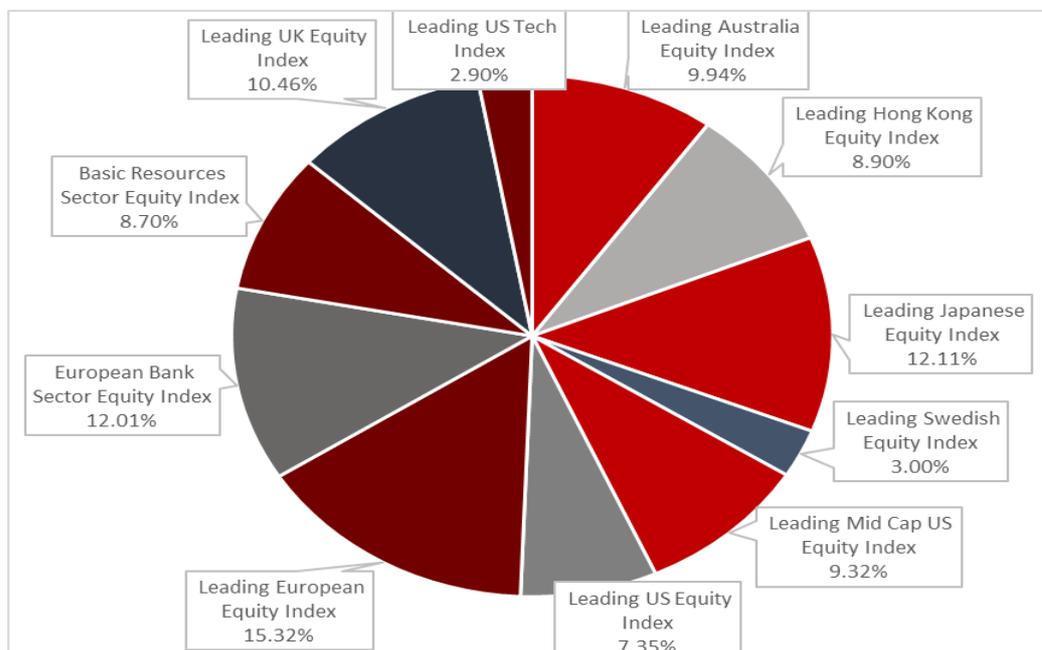

### MONTHLY COMMENTARY

The fund had its biggest monthly increase since inception this month. The 5.7% increase was due to the recovery in the equity index markets in January and the decline in market volatility. Another range accrual trade matured this month paying back the £6m original capital plus 7.135% per annum after two years. The duration (the amount of time in years required for all the structured products held in the fund to mature) declined by over a year compared to the end of December, and is now just under four years where it was just over five years a month ago. The fund also received a quarterly coupon of 2.11% (8.44% per annum) on a £14m structured product linked to a basic resources equity index and an Australia equity index.

### INVESTMENT OBJECTIVE AND INVESTMENT SELECTION

The fund's objective is to return an average annual return of cash (3m GBP LIBOR) plus 6% over a rolling three-year period with a volatility lower than the leading benchmark equity indices. This return will be achieved by investing in a diversified portfolio of structured products.

### PORTFOLIO DETAILS

### Structured Products Fund: FAQs

1. **What would the return be on the fund's existing portfolio if markets stayed at their current levels, and when would this be achieved?**

The return would be 40.01%, with a weighted average time to maturity of 3.96 years.

2. **What is the smallest index move that would cause a structured product held by the fund to lose money? When would this occur?**

The European Banks Equity Index would have to fall by 11.12% and be below this level at the close on 25 August 2023 for the fund to lose any money. The average index fall required is 27.05% from current levels.

3. **How many of the structured products held by the fund would pay their maximum return if markets stayed at their current levels?**

Of the 20 trades held by the fund, 17 would pay their target return with indices at their current levels. The remaining three trades would pay an average annualised return of 6.38%.

**For Mattioli Woods plc's clients only**

The fund currently has exposure to the performance of 11 equity indices in its portfolio, with the percentage the fund holds in each index shown above. The portfolio is not dependent on these indices going up to increase the NAV of the fund. Instead, the fund will benefit from a combination of these indices increasing, falling or moving sideways over the short to medium term.
