- **SEDOL:** BD87QV6
- **Bloomberg code:** CBKMWSP LX

MONTHLY COMMENTARY

The fund's NAV increased by 2.94% to 91.1% in July. In early July, one of the structured products held by the fund autocalled after two years and returned 16% plus its original capital of £20m. This product was linked to the Japan and Australia benchmark equity indices and paid a return despite the Japan index only increasing by 4.59% and the Australia index falling by 2.73% over two years. The fund is currently holding a relatively large amount of cash, and the advisers are looking to deploy this cash as and when opportunities allow, given the current nervous state of investors and the uncertain outlook for many markets short term.

INVESTMENT OBJECTIVE AND INVESTMENT SELECTION

The Structured Products Fund holds a diversified portfolio of individually created structured products. Structured products aim to deliver fixed returns over the long term.* Each structured product is an investment in a domestic, international, and/or sector-specific index, or a range of those indices. The fund itself is designed to deliver growth, with volatility less than that of leading global equity indices over the long term. This return will be achieved by investing in a diversified portfolio of structured products.

* Your investment does not have a capital or return guarantee

PORTFOLIO DETAILS

The chart below shows the exposure the fund has to each index for all 14 products currently held by the fund.

Structured Products Fund: FAQs

1. **What is the smallest index move that would cause a structured product currently held by the fund to lose money? When would this occur?**

The Hong Kong Equity Index would have to fall by 16.45% and be below this level at the close on 19 January 2024 for this structured product to realise a loss of capital. The average index fall required is 29.11% from current levels.

2. **How many of the structured products currently held by the fund would pay their maximum return if markets remained at their current levels?**

Of the 11 structured products currently held by the fund, 9 would pay their maximum return with indices at their current levels. The remaining two products would pay an average return of 1.91% per annum

As per the fund's Key Investor Information document (KIID), the fund can invest in a range of financial derivative instruments such as structured products. The KIID is available in the 'Fund Literature' section of our website. Of the 14 products currently held by the fund, 11 are structured products. Each structured product is exposed to two equity indices. Due to current market conditions, the advisers have entered into three non-structured product derivative transactions to help protect the fund against further falls in certain equity markets in the short term. The three transactions reduce the fund's exposure to movements in the UK, Australian and US (mid cap) indices. The net long exposure the fund has to each index is shown in the pie chart above. The fund is not dependent on these indices going up to increase the NAV. Instead, the fund should benefit from a combination of these indices increasing, falling, or moving sideways over the short to medium term.

FUND PERFORMANCE

All the structured products held by the fund have an early maturity or autocall feature, dependent on the performance of the indices linked to the products. A total of £179.5m has been invested in the structured products currently held by the fund. At current index levels, £145.5m of the £179.5m invested in structured products would pay the maximum return and £34m would pay back their initial capital.
