- **Bloomberg code:** CBKMWSP LX

MONTHLY COMMENTARY

The fund's NAV increased by 6.37% to 95.1% in November. All the indices the Fund is exposed to had a positive performance in November and equity market volatility declined to further enhance the NAV of the Fund. As shown on the bar chart on page 2, the fund now has £54.5m of structured products that will autocall and pay their maximum return over the next year if the Japan, US Mid Cap, European and US Technology indices stay at their levels as of the 30 November or increase. This £54.5m represents just over 30% of the £179.5m the Fund has invested in structured products. The first of these maturities is due to autocall on the 4th December. The Fund's AUM increased by 4.65% to £211.69m this month

INVESTMENT OBJECTIVE AND INVESTMENT SELECTION

The Structured Products Fund holds a diversified portfolio of individually created structured products. Structured products aim to deliver fixed returns over the long term.* Each structured product is an investment in a domestic, international, and/or sector-specific index, or a range of those indices. The fund itself is designed to deliver growth, with volatility less than that of leading global equity indices over the long term. This return will be achieved by investing in a diversified portfolio of structured products.

* Your investment does not have a capital or return guarantee

PORTFOLIO DETAILS

The chart below shows the exposure the fund has to each index for all 12 products currently held by the fund.

Structured Products Fund: FAQs

1. **What is the smallest index move that would cause a structured product currently held by the fund to lose money? When would this occur?**

The Hong Kong Index would have to fall by 20.02% and be below this level at the close on 7 January 2026 for this structured product to realise a loss of capital. The average index fall required is 35.53% from current levels.

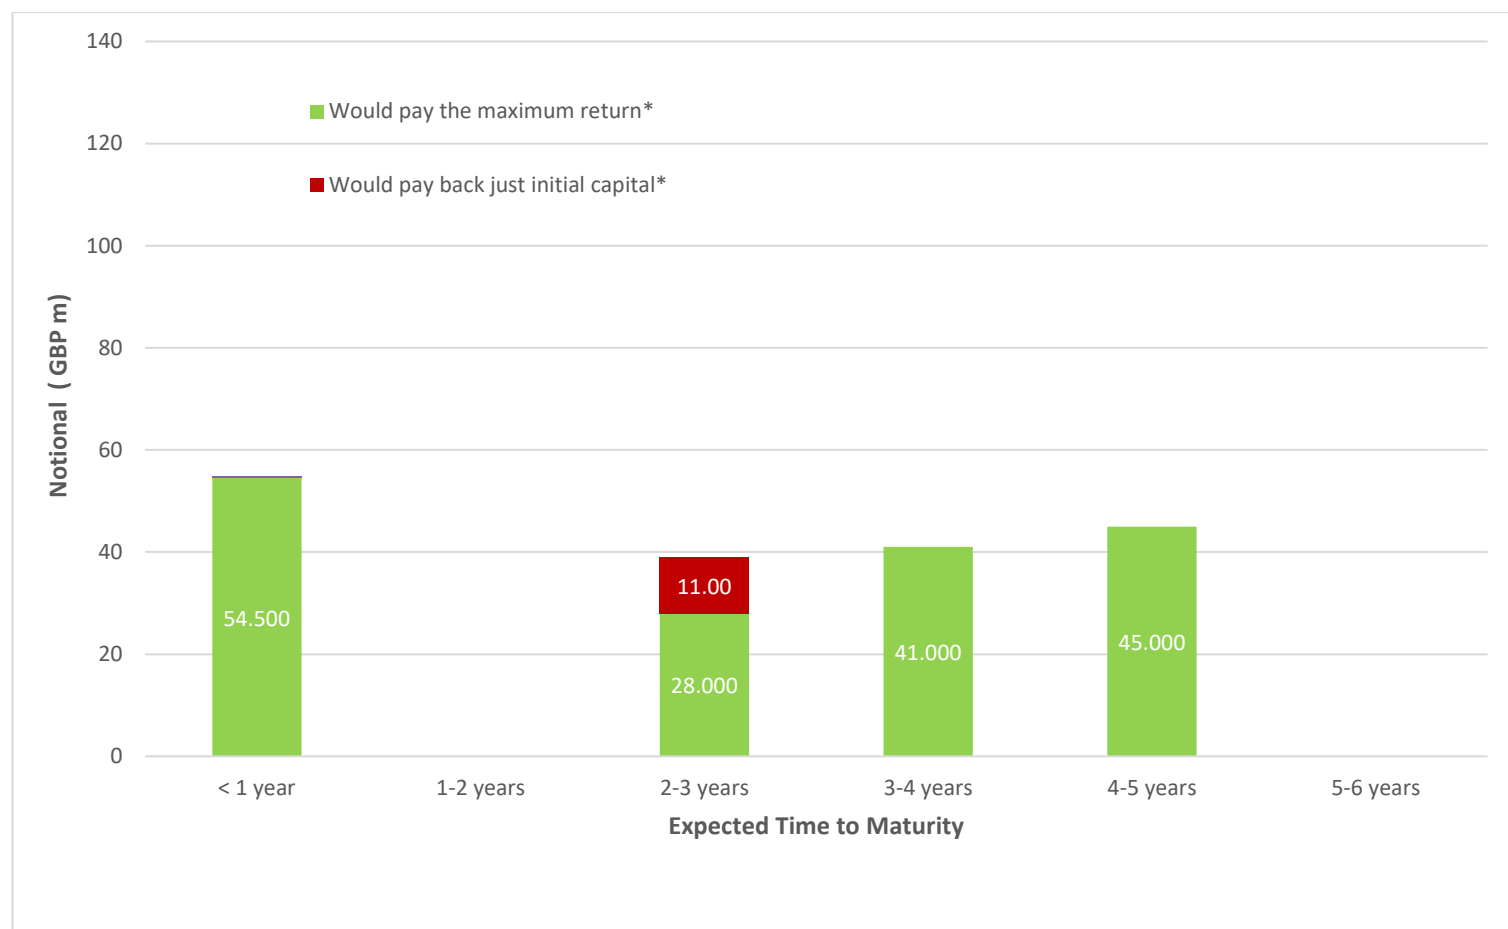

2. **How many of the structured products currently held by the fund would pay their maximum return if markets remained at their current levels?**

Of the 11 structured products currently held by the fund, 10 would pay their maximum return with indices at their current levels. The remaining structured product would pay a return of 2.08% per annum

As per the fund's Key Investor Information document (KIID), the fund can invest in a range of financial derivative instruments such as structured products. The KIID is available in the 'Fund Literature' section of our website. Of the 12 products currently held by the fund, 11 are structured products. Each structured product is exposed to two equity indices. Due to current market conditions, the advisers have entered into one non-structured product derivative transaction to help protect the fund against further falls in certain equity markets in the short term. This transaction reduces the fund's exposure to movements in the UK index. The net long exposure the fund has to each index is shown in the pie chart above. The fund is not dependent on these indices going up to increase the NAV. Instead, the fund should benefit from a combination of these indices increasing, falling, or moving sideways over the short to medium term.

FUND PERFORMANCE

All the structured products held by the fund have an early maturity or autocall feature, dependent on the performance of the indices linked to the products. A total of £179.5m has been invested in the structured products currently held by the fund. At current index levels, £168.5m of the £179.5m invested in structured products would pay the maximum return and £11m would pay back their initial capital.
