

KEY FACTS

- **Launched:** 28 November 2016
- **Fund size:** £200.89m (as at 29 October 2020)
- **NAV:** 89.4%
- **Annual management charge (AMC):** 0.75%
- **Total expense ratio (TER):** 0.92% (as at 31 December 2019, subject to change annually)
- **ISIN:** LU1440702675
- **SEDOL:** BD87QV6
- **Bloomberg code:** CBKMWSP LX

MONTHLY COMMENTARY

The fund's NAV decreased by 1.2% to 89.4% in October. Nearly all of the Equity Indices the Fund is exposed to had a negative performance last month. The UK benchmark was down 5.35% and its European equivalent fell by 7.91%. The leading equity indices in Japan and the US also fell, albeit by much smaller percentages. Of all the leading indices the Fund is exposed to, only the Hong Kong benchmark index showed a positive performance. The Fund's NAV fell by 1.22%, helped in part by the Fund's cash position and the largely defensive portfolio of Structured Products held by the Fund. The result of the US election early next month could help equity markets, but the concerns over Covid-19 and the Brexit agreement will still be a concern for most equity investors.

INVESTMENT OBJECTIVE AND INVESTMENT SELECTION

The Structured Products Fund holds a diversified portfolio of individually created structured products. Structured products aim to deliver fixed returns over the long term.* Each structured product is an investment in a domestic, international, and/or sector-specific index, or a range of those indices. The fund itself is designed to deliver growth, with volatility less than that of leading global equity indices over the long term. This return will be achieved by investing in a diversified portfolio of structured products.

* Your investment does not have a capital or return guarantee

PORTFOLIO DETAILS

The chart below shows the exposure the fund has to each index for all 13 products currently held by the fund.

Structured Products Fund: FAQs

1. **What is the smallest index move that would cause a structured product currently held by the fund to lose money? When would this occur?**

The UK Equity Index would have to fall by 13.64% and be below this level at the close on 7 January 2026 for this structured product to realise a loss of capital. The average index fall required is 24.52% from current levels.

2. **How many of the structured products currently held by the fund would pay their maximum return if markets remained at their current levels?**

Of the 11 structured products currently held by the fund, four would pay their maximum return with indices at their current levels. The remaining seven products would pay an average return of 1.22% per annum

As per the fund's Key Investor Information document (KIID), the fund can invest in a range of financial derivative instruments such as structured products. The KIID is available in the 'Fund Literature' section of our website. Of the 13 products currently held by the fund, 11 are structured products. Each structured product is exposed to two equity indices. Due to current market conditions, the advisers have entered into two non-structured product derivative transactions to help protect the fund against further falls in certain equity markets in the short term. The two transactions reduce the fund's exposure to movements in the UK and US (mid cap) indices. The net long exposure the fund has to each index is shown in the pie chart above. The fund is not dependent on these indices going up to increase the NAV. Instead, the fund should benefit from a combination of these indices increasing, falling, or moving sideways over the short to medium term.

FUND PERFORMANCE

All the structured products held by the fund have an early maturity or autocall feature, dependent on the performance of the indices linked to the products. A total of £179.5m has been invested in the structured products currently held by the fund. At current index levels, £54.5m of the £179.5m invested in structured products would pay the maximum return and £125m would pay back their initial capital.
