- **SEDOL:** BD87QV6
- **Bloomberg code:** CBKMWSP LX

MONTHLY COMMENTARY

The fund's NAV increased by 3.02% this month and by 19.63% in 2019. The fund ended a strong fourth quarter performance with a £15m defensive autocall maturing after two years paying 16% (8% per annum). This structured product was linked to the leading Hong Kong and Australian indices and delivered the return despite the Hong Kong Index falling by 4.69% over the two-year period. The advisers also bought a new defensive autocall structured product linked to the leading Japanese and US mid cap indices.

INVESTMENT OBJECTIVE AND INVESTMENT SELECTION

The Structured Products Fund is a diversified portfolio of individually created structured products. Structured products aim to deliver fixed returns over the long term.* Each structured product is an investment in a domestic, international, and/or sector-specific index, or a range of those indices. The fund itself is designed to deliver growth, with volatility less than that of leading global equity indices over the long term. This return will be achieved by investing in a diversified portfolio of structured products.

* Your investment does not have a capital or return guarantee

PORTFOLIO DETAILS

Structured products fund: FAQs

1. **What is the smallest index move that would cause a structured product currently held by the fund to lose money? When would this occur?**

The European Banks Equity Index would have to fall by 15.91% and be below this level at the close on 27 November 2023 for this structured product to realise a loss of capital. The average index fall required is 37.97% from current levels.

2. **How many of the structured products currently held by the fund would pay their maximum return if markets remained at their current levels?**

Of the 14 trades currently held by the fund, 12 would pay their maximum return with indices at their current levels. The remaining two trades would pay an average annualised return of 3.00%.

The fund currently holds 14 structured products. The proportion invested in each structured product is shown in the pie chart above. The fund is not dependent on these indices going up to increase the NAV. Instead, the fund should benefit from a combination of these indices increasing, falling, or moving sideways over the short to medium term.

FUND PERFORMANCE

All the structured products held by the fund have an early maturity or autocall feature, dependent on the performance of the indices linked to the products. A total of £222.175m has been invested in the structured products currently held by the fund. At current index levels, £122.5m of the £222.175m of these structured products would autocall in less than one year, £16m would autocall in less than two years and £54m would have a maturity of three years or more. The remaining £29.675m invested would return capital only at current levels.

* At current market levels

The fund is now **82.52%** invested in individual structured products. Full details of the fund's holdings can be found on our website: www.structuredproductsfund.com/current-market-exposure.
