- **NAV:** 101.2%
- **Annual management charge (AMC):** 0.75%
- **Estimated total expense ratio (TER):** 0.97%
- **ISIN:** LU1440702675
- **SEDOL:** BD87QV6
- **Bloomberg code:** CBKMWSP LX

MONTHLY COMMENTARY

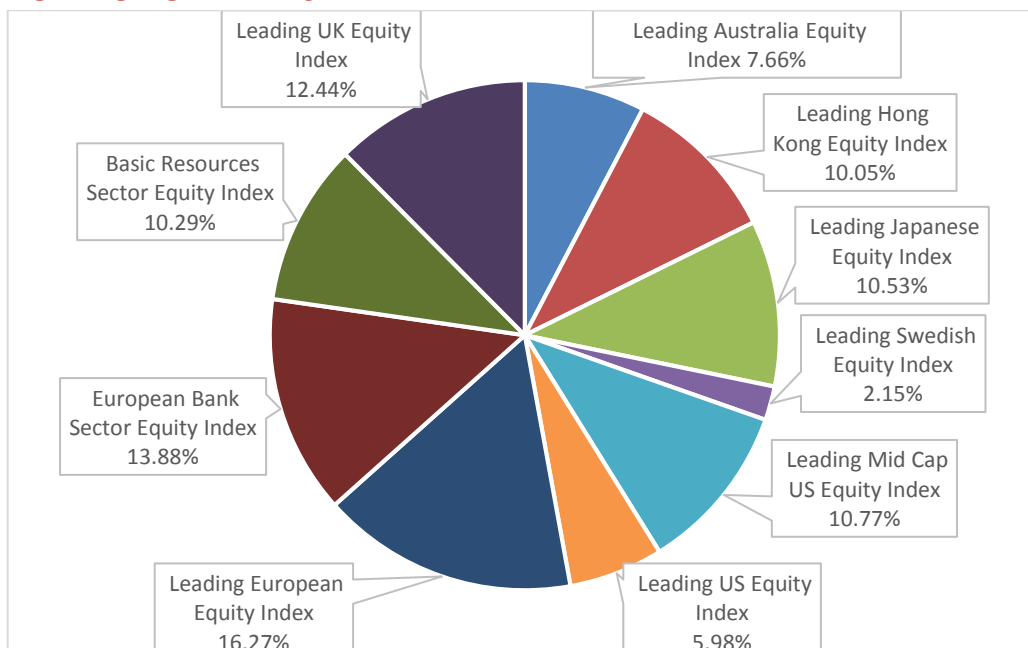

The NAV of the fund continues to be held back, primarily by the underperformance of the European Bank Sector Index. Our view remains that the recent decline in the banking sector is overdone and driven by sentiment rather than a change in fundamentals. The current estimate* for Eurozone banks is earnings growth of 11% p.a. over the next three years, and we expect this view to overcome the current negative sentiment in the medium term.

INVESTMENT OBJECTIVE AND INVESTMENT SELECTION

The fund's objective is to return an average annual return of cash (3m GBP LIBOR) plus 6% over a rolling three-year period with a volatility lower than the leading benchmark equity indices. This return will be achieved by investing in a diversified portfolio of structured products.

PORTFOLIO DETAILS

Structured Products Fund: FAQs

1. **What would the return be on the fund's existing portfolio if markets stayed at their current levels, and when would this be achieved?**

The return would be 32.18%, with a weighted average time to maturity of 3.41 years.

2. **What is the smallest index move that would cause a structured product held by the fund to lose money? When would this occur?**

The European Bank Sector Equity Index would have to fall by 23.9% and be below this level at the close on 28 August 2023 for the fund to lose any money. The average index fall required is 35.91% from current levels.

3. **How many of the structured products held by the fund would pay their target return if markets stayed at their current levels?**

Of the 22 trades held by the fund, 18 would pay their target return with indices at their current levels. The remaining 4 trades would pay a total of 58.36% after 6 years.

The fund currently has exposure to the performance of ten equity indices in its portfolio, with the percentage the fund holds in each index shown above. The portfolio is not dependent on these indices increasing to increase the NAV of the fund – instead, the fund will benefit from a combination of these indices increasing, falling or moving sideways over the short to medium term.
