- **Estimated total expense ratio (TER):** 0.97%
- **ISIN:** LU1440702675
- **SEDOL:** BD87QV6
- **Bloomberg code:** CBKMWSP LX

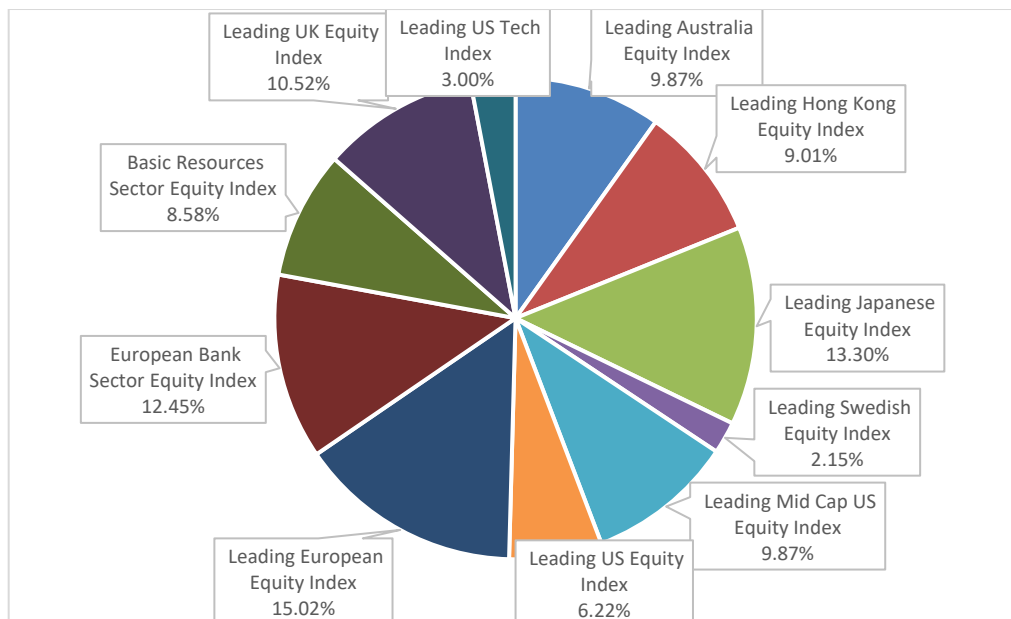

### MONTHLY COMMENTARY

There were no new trades this month as the advisers are concentrating on increasing the existing structured products in the portfolio – two structured products were increased with a total notional of £5m. The increase in the NAV was largely due to the increase in the European Bank and Natural Resources sector indices. The fund received a 9.176% annual coupon from a range accrual structured product linked to the Japan and European Bank sector indices, and a 2.26% quarterly coupon (9.04%) annualized from a structured product linked to the European Equity and Natural Resources Equity Indices.

### INVESTMENT OBJECTIVE AND INVESTMENT SELECTION

The fund's objective is to return an average annual return of cash (3m GBP LIBOR) plus 6% over a rolling three-year period with a volatility lower than the leading benchmark equity indices. This return will be achieved by investing in a diversified portfolio of structured products.

### PORTFOLIO DETAILS

### Structured Products Fund: FAQs

1. **What would the return be on the fund's existing portfolio if markets stayed at their current levels, and when would this be achieved?**

The return would be 28.74%, with a weighted average time to maturity of 3.12 years.

2. **What is the smallest index move that would cause a structured product held by the fund to lose money? When would this occur?**

The European Banks Equity Index would have to fall by 20.68% and be below this level at the close on 15 December 2023 for the fund to lose any money. The average index fall required is 37.03% from current levels.

3. **How many of the structured products held by the fund would pay their target return if markets stayed at their current levels?**

Of the 22 trades held by the fund, 18 would pay their target return with indices at their current levels. The remaining four trades would pay an average annualized return of 3.64%.

The fund currently has exposure to the performance of eleven equity indices in its portfolio, with the percentage the fund holds in each index shown above. The portfolio is not dependent on these indices going up to increase the NAV of the fund – instead, the fund will benefit from a combination of these indices increasing, falling or moving sideways over the short to medium term.

### FUND EXPOSURE
