- **Estimated total expense ratio (TER):** 0.97%
- **ISIN:** LU1440702675
- **SEDOL:** BD87QV6
- **Bloomberg code:** CBKMWSP LX

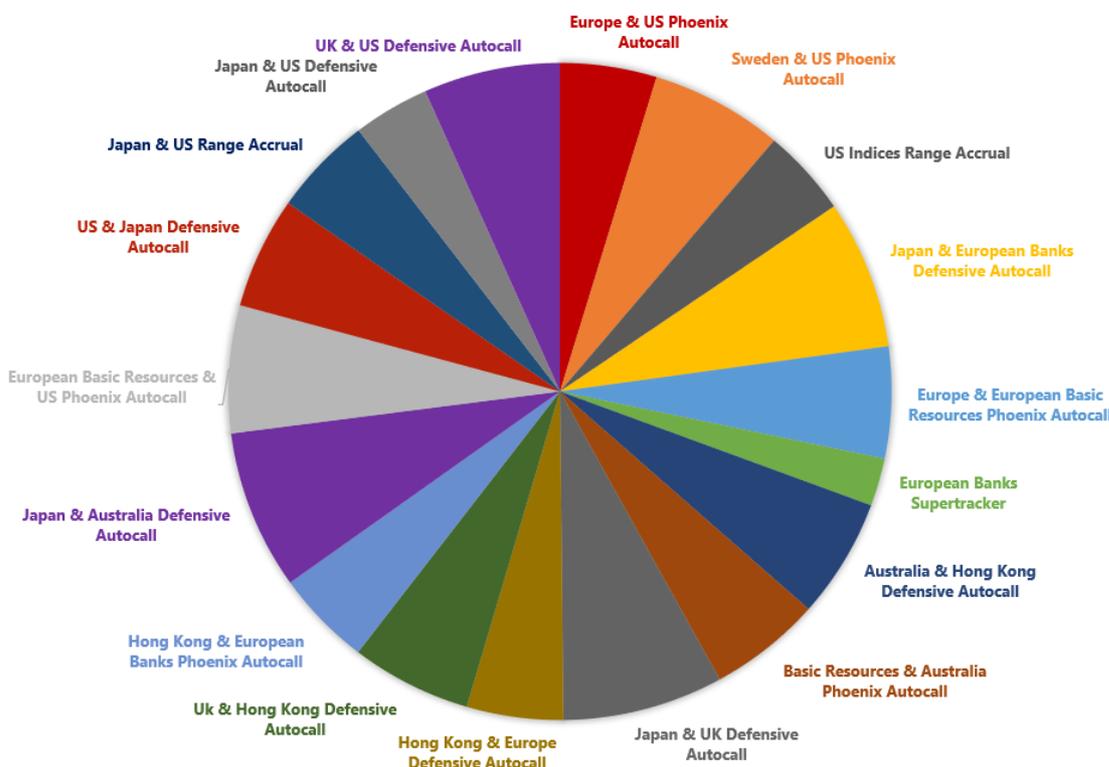

MONTHLY COMMENTARY

The fund's NAV increased by 4.83% in September. The structured products linked to the European Banking and Natural Resources Sector Indices benefited most from the increase in equity indices. The increase in equity markets reduced the duration (the average amount of time it would take for all the structured products in the portfolio to mature) from 3.14 years to 2.56 years. The fund received a 2.26% quarterly coupon from a structured product linked to a leading European Equity Index and a Natural Resources Sector Index.

INVESTMENT OBJECTIVE AND INVESTMENT SELECTION

The Structured Products Fund is a diversified portfolio of individually created structured products. Structured products aim to deliver fixed returns over the long term.* Each structured product is an investment in a domestic, international, and/or sector-specific index, or a range of those indices. The fund itself is designed to deliver growth, with volatility less than that of leading global equity indices over the long term. This return will be achieved by investing in a diversified portfolio of structured products.

PORTFOLIO DETAILS

Structured products fund: FAQs

1. **What is the smallest index move that would cause a structured product currently held by the fund to lose money? When would this occur?**

The European Banks Equity Index would have to fall by 5.41% and be below this level at the close on 15 December 2023 for this structured product to realise a loss of capital. The average index fall required is 29.23% from current levels.

2. **How many of the structured products currently held by the fund would pay their maximum return if markets remained at their current levels?**

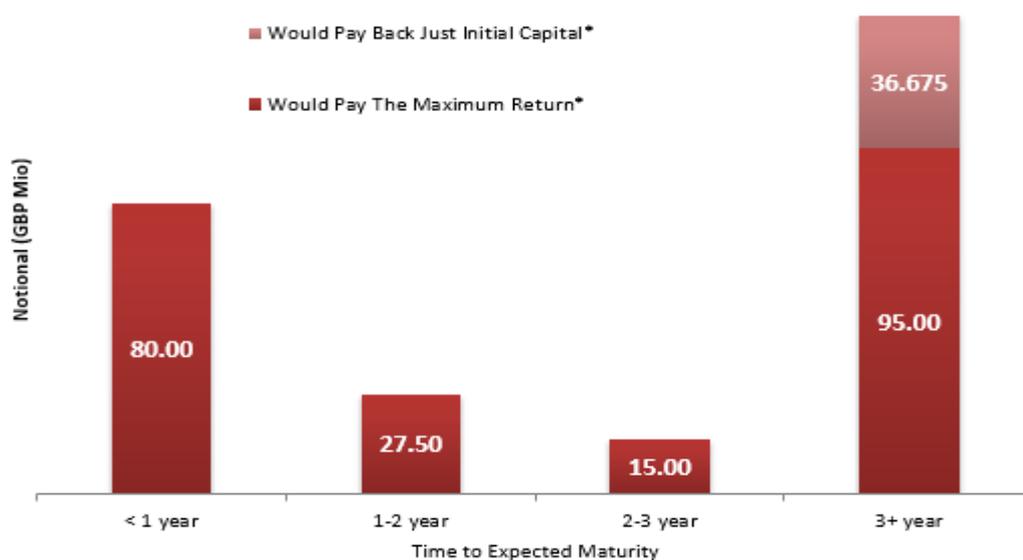

Of the 18 trades currently held by the fund, 16 would pay their maximum return with indices at their current levels. The remaining two trades would pay an average annualised return of 7.54%.

**Your investment does not have a capital or return guarantee.*

The fund currently holds 18 structured products. The proportion invested in each structured product is shown in the pie chart above. The portfolio is not dependent on these indices going up to increase the NAV of the fund. Instead, the fund will benefit from a combination of these indices increasing, falling, or moving sideways over the short to medium term.

FUND PERFORMANCE

All the structured products held by the fund have an early maturity or autocall feature, dependent on the performance of the indices linked to the products. A total of £254.175m has been invested in the structured products currently held by the fund. At current index levels, £80m of the £254.175m of these structured products would autocall in less than one year; £27.5m would autocall in less than two years, £15m would autocall in two to three years, and £95m would have a maturity of three years or more. The remaining £36.675m invested would return capital only at current levels.

*at current market levels

The fund is now **95.26%** invested in individual structured products. Full details of the fund's holdings can be found on our website: www.structuredproductsfund.com/current-market-exposure.
