- **ISIN:** LU1440702675
- **SEDOL:** BD87QV6
- **Bloomberg code:** CBKMWSP LX

**MONTHLY COMMENTARY**

The Fund’s NAV increased by 1.91% to 101.3% in April. One of the structured products held by the Fund matured after 2 years and paid a return of 15% this month. The Fund had £10.5 million invested in this structured product. The advisers invested £9 million in a new structured product linked to the Europe and Australia benchmark equity indices, which will return 7.31% and mature if both indices are at or above their start levels after one year. For subsequent years, the 7.31% per annum coupon will be paid if neither index has fallen by 2% per annum from their start levels, observed on the anniversary of the start date. The Fund’s NAV has now increased by 41.09% since the start of the equity market recovery in late March 2020. The Fund now has £197.92 million AUM.

**INVESTMENT OBJECTIVE AND INVESTMENT SELECTION**

The Structured Products Fund holds a diversified portfolio of individually created structured products. Structured products aim to deliver fixed returns over the long term.\* Each structured product is an investment in a domestic, international, and/or sector-specific index, or a range of those indices. The Fund itself is designed to deliver growth, with volatility less than that of leading global equity indices over the long term. This return will be achieved by investing in a diversified portfolio of structured products.

\* your investment does not have a capital or return guarantee

**PORTFOLIO DETAILS**

The chart below shows the exposure the Fund has to each index for all nine products currently held by the Fund.

**Structured Products Fund: FAQs**

**1. What is the smallest index move that would cause a structured product currently held by the Fund to lose money? When would this occur?**

The Hong Kong index would have to fall by 31.04% and be below this level at the close on 7 May 2024 for this structured product to realise a loss of capital. The average index fall required is 45.39% from current levels.

**2. How many of the structured products currently held by the Fund would pay their maximum return if markets remained at their current levels?**

Of the nine structured products currently held by the Fund, eight would pay their maximum return with indices at their current levels. The remaining structured product would pay a return of 1.81% per annum.

As per the Fund’s Key Investor Information Document (KIID), the Fund can invest in a range of financial derivative instruments such as structured products. The KIID is available in the ‘Fund Literature’ section of our website. All nine products currently held by the Fund are structured products and each one is exposed to two equity indices. The exposure the Fund has to each index is shown in the pie chart above. The Fund is not dependent on these indices going up to increase the NAV. Instead, the Fund should benefit from a combination of these indices increasing, falling, or moving sideways over the short to medium term.

**FUND PERFORMANCE**

All the structured products held by the Fund have an early maturity or autocal feature, dependent on the performance of the indices linked to the products. A total of £157 million has been invested in the structured products currently held by the Fund. At current index levels, £146 million of the £157 million invested in structured products would pay the maximum return and £11 million would pay back their initial capital.

\* at current market levels

The Fund is now **86.73%** invested in individual structured products. Full details of the Fund’s structured product holdings can be found on our website: [www.structuredproductsFund.com/current-market-exposure](http://www.structuredproductsFund.com/current-market-exposure).
