- **ISIN:** LU1440702675
- **SEDOL:** BD87QV6
- **Bloomberg code:** CBKMWSP LX

### MONTHLY COMMENTARY

The Fund's NAV increased by 1.88% to 97.6% in February. The strategy of the Fund has been to invest in defensive autocallable structured products for some time. "Defensive" means attempting to reduce the impact of falling markets on the Fund's investors by investing in Structured Products that can pay a return even if markets fall. On average the indices the Fund is exposed to can fall by 39.47% before any returns are lost. All but one of the holdings of the Fund are defensive autocalls and this strategy will continue for the foreseeable future. This strategy has resulted in a 35.93% increase in the NAV since the start of the equity recovery in late March 2020, outperforming the UK benchmark equity index by 4%.

### INVESTMENT OBJECTIVE AND INVESTMENT SELECTION

The Structured Products Fund holds a diversified portfolio of individually created structured products. Structured products aim to deliver fixed returns over the long term.\* Each structured product is an investment in a domestic, international, and/or sector-specific index, or a range of those indices. The Fund itself is designed to deliver growth, with volatility less than that of leading global equity indices over the long term. This return will be achieved by investing in a diversified portfolio of structured products.

\* Your investment does not have a capital or return guarantee.

### PORTFOLIO DETAILS

The chart below shows the exposure the Fund has to each index for all nine products currently held by the Fund.

### Structured Products Fund: FAQs

1. **What is the smallest index move that would cause a structured product currently held by the Fund to lose money? When would this occur?**

The UK index would have to fall by 25.60% and be below this level at the close on 7 January 2026 for this structured product to realise a loss of capital. The average index fall required is 39.47% from current levels.

2. **How many of the structured products currently held by the Fund would pay their maximum return if markets remained at their current levels?**

Of the nine structured products currently held by the Fund, eight would pay their maximum return with indices at their current levels. The remaining structured product would pay a return of 2.21% per annum.

As per the Fund's Key Investor Information document (KIID), the Fund can invest in a range of financial derivative instruments such as structured products. The KIID is available in the 'Fund Literature' section of our website. Of the nine products currently held by the Fund, eight are structured products. Each structured product is exposed to two equity indices. Due to current market conditions, the advisers have entered into one non-structured product derivative transaction to help protect the Fund against further falls in certain equity markets in the short term. This transaction reduces the Fund's exposure to movements in the UK Equity Index. The net long exposure the Fund has to each index is shown in the pie chart above. The Fund is not dependent on these indices going up to increase the NAV. Instead, the Fund should benefit from a combination of these indices increasing, falling, or moving sideways over the short to medium term.

### FUND PERFORMANCE

All the structured products held by the Fund have an early maturity or autocal feature, dependent on the performance of the indices linked to the products. A total of £157.5 million has been invested in the structured products currently held by the Fund. At current index levels, £146.5 million of the £157.5 million invested in structured products would pay the maximum return and £11 million would pay back their initial capital.

\* At current market levels

The Fund is now **78.58%** invested in individual structured products. Full details of the Fund's structured product holdings can be found on our website: [www.structuredproductsFund.com/current-market-exposure](http://www.structuredproductsFund.com/current-market-exposure).
